

## **The 38<sup>th</sup> edition of the International Power Industry Fair ENERGETAB 2025 is now behind us**

During the three-day International Power Industry Fair ENERGETAB 2025, which ended on September 18, almost 500 exhibitors from 21 European and Asian countries presented a full range of the latest devices, apparatus, vehicles and technologies for both professional and industrial power engineering as well as small prosumers.

During the official opening ceremony of the fair, the president of ZIAD Bielsko-Biała SA - the organizer of the Fair - Mr. Dariusz Mrzygłód, welcomed the numerous guests, assuring that ENERGETAB is the best place and time to present innovative solutions for the energy sector and wishing those present at the Fair to fulfill their expectations related to this event. Then, the honorary guests were welcomed, including Mirosław Suchoń, Member of the Parliament of the Republic of Poland, Leszek Kosiorek, President of the Management Board of TAURON Dystrybucja SA - Strategic partner of ENERGETAB trade fair and presidents of associations and chambers cooperating in the Fair organization. The official opening of the Fair was performed by the Mayor of Bielsko-Biała, Mr. Jarosław Klimaszewski.

During the ceremonial inauguration, awards were also presented in the Fair competition for a particularly outstanding product, granted by the Competition Committee chaired by Prof. Jacek Wańkowicz (*the list of winners is available on the website [www.energetab.pl](http://www.energetab.pl).*)

For the numerous visitors to this year's ENERGETAB trade fair, it was an excellent opportunity to get to know and compare an entire spectrum of presented specialist power machines and devices, transmission and distribution system equipment, control and measurement equipment, automation and steering equipment, energy-saving industrial and road lighting, IT and telecommunications systems used in the power industry and innovative network technologies.

The range of devices and technologies related to renewable energy sources or electromobility presented at the Fair is growing rapidly year by year. There was a significant number of suppliers of various sizes of battery energy storage devices, often offered together with charging points for electric cars and additional power supply from renewable energy sources.

As every year, the Fair was accompanied by conferences organized by the industry partners of the Fair.

Three special zones were designated in the open exhibition areas of the Fair:

- a) "RES Zone", where demonstrations of devices related to the generation of electricity from renewable sources were held;
- b) the "Eco-mobility Zone", which promoted suppliers of electric cars and manufacturers of charging stations for these vehicles;
- c) "Practical Demonstration Zone - SPP", where demonstrations of energy technologies were held, such as a mobile 110 kV bay, an innovative system for transporting and unloading transformer stations in difficult terrain conditions, installations of the latest through-wiring joints and heads, as well as cold-shrink joints and fibre optic welding demonstrations.

The organiser extended special congratulations and thanks to long-standing ENERGETAB exhibitors, who celebrated significant anniversaries during the Fair for their long-standing cooperation.

We wish to thank all the exhibitors and visitors as well as participants in conferences and business meetings for taking part in this year's Fair. We wish you great results of this participation and invite you next year to the next **39<sup>th</sup> ENERGETAB** fair, which will take place on **September 15-17, 2026**.
